Students can obtain an Aplia license in one of two ways:

**Option 1:** Buy a new copy of the Hall & Lieberman textbook bundled with an Aplia license code. The total cost is $184 if you buy the bundled textbook at the bookstore or $127.50 if you buy the same package directly from the Aplia website (after you pay $70 for the software, they will offer the physical book for $50 + $7.50 shipping). The price of using Aplia is included in the price of buying the textbook. In addition to owning a physical copy of the textbook, you will also be able to read an identical online version at Aplia's website. They use "flashpaper" technology that makes the online pages look identical to those in the physical textbook.

**Option 2:** To save money, you can bypass purchasing a physical copy of the textbook and rely exclusively on the online version. This option entails purchasing an Aplia license at their website for $70 (or at the bookstore for $79) with nothing else to buy. If you try the online-only option and later change your mind, Aplia will sell you a physical textbook at a price that allows you to break even compared with the price you would have paid in the first place.

**Notes:**

(a) I'm told that the campus bookstores pre-package textbooks for incoming freshmen students. The pre-packaged book will include an Aplia license code. That is, the pre-packaging will reflect Option 1 above, and you'll be all set. (In the event that you might wish to return the pre-packaged items, you shouldn't open them.)

(b) Aplia does not require immediate payment for the license. You can use Aplia until Sunday, Sept. 14 without paying - e.g., if you're temporarily short on funds or not sure if you want to stay in the class.

(c) Be sure not to buy a version of the new textbook that doesn't include an Aplia license (check for an Aplia logo on the textbook cover). If you do, you won't be able to do the problem sets without paying an additional $70 license fee. You'd almost certainly be wasting money compared with Option 1.

(d) It is rarely cost-effective to buy a used textbook for this class because used books do not include an Aplia license. The combined cost of a used textbook plus the $70 Aplia fee generally exceeds the total cost under Option 1.
