Last Revised: 3 April 2011
The Enron Scandal and Moral Hazard

- Enron investors and retirees were left with *worthless stock*.
- Enron was charged with *securities fraud* (fraudulent manipulation of publicly reported financial results, lying to SEC, ...)

**QUESTION:** In what ways are *security market moral hazard problems* at the heart of the Enron bankruptcy scandal?
Enron was a Houston-based natural gas pipeline company formed by merger in 1985.

By early 2001, Enron had morphed into the 7th largest U.S. company, and the largest U.S. buyer/seller of natural gas and electricity.

Enron was heavily involved in energy brokering, electronic energy trading, global commodity and options trading, etc.
On October 16, 2001, in the first major public sign of trouble, Enron announces a huge third-quarter loss of $618 million.

Buying as the Ship Went Down

On the advice of Alliance Capital Management, one of its investment managers, the Florida state pension fund bought Enron stock even as the company’s troubles became known. A former Alliance executive, Frank Savage, is also a member of Enron’s board.

Purposes of Enron Stock Since Oct. 17

Nov. 30 Pension fund sells its entire Enron holdings, 7.6 million shares, at 28 cents a share.

Oct. 17 Enron reduces shareholder equity by $1.2 billion to account for transactions involving certain partnerships.

Oct. 22 Enron discloses that the Securities and Exchange Commission has opened an inquiry into the partnerships.

Nov. 8 Enron says it overstated profits for the previous five years by $586 million.

Dec. 2 Enron files for bankruptcy protection.

Investigative Findings

🌟 1993-2001: Enron used **complex dubious energy trading schemes**

☐ Example: “Death Star” Energy Trading Strategy

- Took advantage of a loophole in the market rules governing energy trading in California

- Enron would schedule electric power transmission on a congested line from bus A to bus B in the opposite direction to demand, thus enabling them to collect a “congestion reduction” fee for seemingly relieving congestion on this line.

- Enron would then schedule the routing of this energy all the way back to bus A so that **no energy was actually bought or sold by Enron in net terms.** It was purely a routing scheme.
1993-2001: Enron also used complex & dubious accounting schemes

- to reduce Enron’s tax payments;
- to inflate Enron’s income and profits;
- to inflate Enron’s stock price and credit rating;
- to hide losses in off-balance-sheet subsidiaries;
- to engineer off-balance-sheet schemes to funnel money to themselves, friends, and family;
- to fraudulently misrepresent Enron’s financial condition in public reports.

WHY WASN’T ENRON STOPPED SOONER!
• Enron’s rapid growth in late 1990s involved large capital investments not expected to generate significant cash flow in short term.

• Maintaining Enron’s credit ratings at an investment grade (e.g., BBB- or higher by S&P) was vital to Enron’s energy trading business.
One perceived solution: Create partnerships structured as **special purpose entities (SPEs)** that could borrow from outside investors without having to be consolidated into Enron’s balance sheet.

**SPE 3% Rule:** No consolidation needed if at least 3% of SPE total capital was owned independently of Enron.
Enron’s creation of over 3000 partnerships started about 1993 when it teamed with Calpers (California Public Retirement System) to create JEDI (Joint Energy Development Investments) fund.

Enron initially thought of these partnerships as temporary solutions for temporary cash flow problems.

Enron later used SPE partnerships under 3% rule to hide bad bets it had made on speculative assets by selling these assets to the partnerships in return for IOUs backed by Enron stock as collateral! (over $1 billion by 2002)

**CALPERS**

50% interest

$250 Mil in Enron Stock

**ENRON**

50% interest

**JEDI**

IOU's

High-Risk Assets
Case Study... Continued

- In Nov 1997, Calpers wants to cash out of JEDI.
- To keep JEDI afloat, Enron needs new 3% partner.
- It creates another partnership **Chewco** (named for the Star Wars character Chewbacca) to buy out Calpers’ stake in JEDI for $383 million.
- Enron plans to back short-term loans to Chewco to permit it to buy out Calper’s stake for $383 million.
Short-term loans

$383 million buyout

$383 million

This is the plan....
Case Study...Continued

- Chewco **needs** $383 million to give Calpers

- It gets.....
  - $240 mil loan from Barclay’s bank *guaranteed by Enron*
  - $132 mil credit from JEDI (*whose only asset is Enron stock*)

- Chewco **still must get 3% of $383 million (about $11.5 million)** from some outside source to avoid inclusion of JEDI’s debt on Enron’s books (SEC filing, 1997).
Case Study...Continued

Chewco Capital Structure: Outside 3%

• $125,000 from William Dodson & Michael Kopper (an aide to Enron CFO Fastow)

• $11.4 mil loans from Big River and Little River (two new companies formed by Enron expressly for this purpose who get a loan from Barclay’s Bank)
Barclay’s Bank begins to doubt the strength of the new companies Big River and Little River.

It requires a cash reserve of $6.6 million to be deposited (as security) for the $11.4 million dollar loans.

This cash reserve is paid by JEDI, whose net worth by this time consists solely of Enron stock, putting Enron in the at-risk position for this amount (red arrow on the next slide.)

“Oh, what a tangled web we weave when first we practice to deceive!”

Walter Scott, Marimon, VI
Profit to Enron from all this?

- Enron received $10 million in guarantee fee + fee based on loan balance to JEDI.
- Enron received a total of $25.7 million in revenues from this source.
- In first quarter of 2000, the increase in price of Enron stock held by JEDI resulted in $126 million in profits to Enron.
Profit to Enron from all this?

- But everything fell apart when Enron’s share price started to drop in Fall 2000 (dot.com bubble burst ↓).

- In November 2001, Enron admitted to the SEC that Chewco was not truly independent of Enron.

- Chewco went bankrupt shortly after this admission by Enron.
Who is to Blame for the Enron Scandal?

Auditors

Enron Board of Directors

Shareholders

Enron

SEC
Who is to Blame for Enron?

- Lax accounting by Arthur Anderson (AA) Co?
- “Rogue” AA auditor David Duncan (fired 1/15/02)?
- Enron’s senior management for hiding losses in dubious off-balance-sheet partnerships?
- CFO Andrew Fastow for setting up these partnerships (6 year prison sentence 9/26/2004)?
- Timothy Belden (trading schemes, 2yrs probation 2007)
- CEO Jeff Skilling (24 year prison sentence 10/23/06)?
- CEO Kenneth Lay (died 7/23/06 with charges pending)?
- Media exaggeration and frenzy?
- Stock analysts who kept pushing Enron stock?
Bad Accounting Practices?

Generally Accepted Accounting Practices (Prior to 2002):

• Auditing companies often consult for the companies they audit (conflict of interest).

• Audit company partners often later accept jobs from their client companies.

• Companies often retain the same auditing company for long periods of time.

• Auditing companies have been allowed to police themselves.
Bad Accounting Practices?

Generally Accepted Accounting Practices (Prior to 2002)... Continued

- Appointment of auditor company is *in theory* by shareholders but *in practice* by senior management.
- Audit Committee members often are *not independent* of senior management - insiders are the ones with the most accurate understanding.
- Audit Committee members have typically been *required* to own company stock to align their incentives with those of company.
Other Dubious Practices?

- Board of Directors have traditionally been paid largely in stock to align their interests with shareholders.

- Directors can sell out early based on insider information.

- When senior executives are charged with failure to abide by SEC rulings, the company typically pays the fine.
Lessons from Enron Scandal

- Demonstrated the importance of “old economy” questions: How does the company actually make its money? Is it sustainable over the long haul? Is it legal!

- Demonstrated the need for significant reform in accounting and corporate governance in the U.S.

- Does this necessarily mean government regulation can fix the problem?
Sarbanes-Oxley Act (SOX) of 2002

- **U.S. legislative response** to recent spate of accounting scandals (Enron, WorldCom, Global Crossing, Adelphia Communications...)

- Compliance with comprehensive reform of accounting procedures is now required for publicly held companies, to promote and improve the quality and transparency of financial reporting by internal and external auditors.
Sarbanes-Oxley Act (SOX) of 2002

- Companies must “list and track performance of their material risks and associated control procedures.”
- CEOs are required to vouch for the financial statements of their companies.
- Boards of Directors must have Audit Committees whose members are independent of company senior management.
- Companies can no longer make loans to company directors.
SOX Act of 2002 … Continued

• SOX Act Essentially a response to one cause of the financial irregularities: failure by auditors, SEC, and other agencies to provide adequate oversight.

• Not clear how SOX Act will prevent misuse of “off-balance-sheet activities” that are difficult to trace.

• SOX Act also does not address other key causes:
  - **misaligned incentives** (e.g., shift from cash to stock option compensation)
  - **focus on short-run profits** rather than longer-run profit performance.
Getting Rid of SPE 3% Rule

**SPE 3% Rule:** Rule permitting Special Purpose Entities (SPEs) created by a firm to be treated as “off-balance-sheet” – i.e., no required consolidation with firm’s balance sheets – as long as at least 3% of the total capital of the SPE was owned independently of the firm.

- Rule raised to 10% in 2003 following Enron scandal

- After more misuse of rule during Subprime Financial Crisis, Financial Accounting Standards Board (FASB) replaced this rule in 2009 with stricter consolidation standards on all asset reporting (FASB 166 & 167).
