

Estimated Costs of Crop Production in Iowa – 2001

The estimated costs of corn, corn silage, soybeans, alfalfa, and pasture maintenance in this report are based on data from several sources. They include the annual Iowa Farm Business Association record summaries, production and costs data from the Economics, Agricultural and Biosystems Engineering, and Agronomy Departments at Iowa State University and a survey of selected agriculture cooperatives around the state.

These costs estimates are representative of average costs for medium and large farms in central Iowa and elsewhere in the state where yields and cultural practices are similar. Smaller farms may have higher fixed costs per acre.

Due to differences in soil potentials, quantity of inputs used and other factors, production costs will vary from farm to farm. Price shifts of inputs can change production costs in both the short and long run. The attached data reflect average cost of purchased inputs and a return to land and labor resources, but do not provide a margin for profit or a return to management. They reflect production costs only, and do not include costs of storage.

Labor has been treated as a fixed cost, since most labor on Iowa farms is supplied by the operator, family or permanent hired labor. However, when deciding among alternative crops, labor should be considered a variable cost. The wage rate used here is \$8.00 per hour. The hours assumed per crop are presented in the budgets. The hours per crop acre includes not only the field work but also time for maintenance, travel, and other activities related to crop production. The land charge is based on rent equivalent. Owned land may require a greater cash outlay.

In the short run, cash income must be sufficient to pay cash costs, including seed, fertilizer, chemicals, insurance, cash rent and hired labor, as well as machinery and operating capital. In the long run, income

should be sufficient to pay all costs of production for resources to be used in their most profitable alternative.

Corn yields reflect rotation benefits. Fertilizer rates have been adjusted to reflect current data on removal rates. Crop insurance costs reflect the mix of multiple peril, hail, and noninsured acres in the state.

Machinery costs reflect both new and used equipment. The machine operations assumed are based on the 1998 Crop Production Practices Survey conducted by the Iowa Agricultural Statistics Service. Further information on this survey can be obtained by contacting the authors.

These figures represent typical costs and are only intended to be guidelines. Actual costs will vary considerably. This is the reason for the column for “Your Estimates.”

Budgets for alfalfa hay establishment with an oat companion crop and by direct seeding are included in this publication. Annual production costs for established alfalfa or alfalfa-grass hay as well as a budget for maintaining grass pastures are included as well. Additional pasture establishment budgets are published in Iowa State University Extension publication AG-96, *Estimated Costs of Pasture and Hay Production*.

Two no-till budgets, one for corn and one for soybeans, are included due to the increasing demand for this information. The major differences between the no-till and conventional budgets are the preharvest machinery, labor, herbicide, and seeding costs. Budgets for genetically modified (GM) soybeans were included in year 2000. One budget is based on conventional tillage practices and one on no-till, drilled soybeans. Cost differences occur similarly to those stated above for the two no-till budgets.

The Estimated Machinery Costs table can be used to budget other alternative tillage and harvesting systems. Variable input prices can change significantly over time.

Cash rent equivalent		\$40.00		\$46.00	_____	_____
Total Annual Cost per Acre	\$59.45	\$32.46	\$64.35	\$16.92	_____	_____

* These are average rates and may vary with soil test and the level of management on a particular field. Different herbicide alternatives could vary this cost.

** Improved grass pastures assume a dominance of cool season grasses such as smooth bromegrass, orchardgrass, tall fescue, or reed canarygrass.

*** Improved grass-legume pasture assumed one third of the forage is made up of red clover, birdsfoot trefoil, or alfalfa.

Estimated Machinery Costs

The following cost estimates are for on-farm use, excluding labor. Depreciation is based on current replacement cost, interest is based on average market rates. Fixed costs will be greater for newer machinery. If annual machine use is greater than that assumed, fixed costs per acre will be lower, and vice versa. Hauling costs are based on a round trip of one mile. Remember these are estimates and they should not take the place of accurate record-keeping. Diesel fuel is estimated to cost \$1.10 per gallon.

Operation	Hours of Use Assumed per Year	Fixed Cost per Acre (depreciation, interest, insurance, housing)	Variable Cost per Acre (fuel, oil, repairs)
Moldboard plow	100	\$7.15	\$4.35
Chisel plow	80	3.23	1.70
Chop stalks	80	4.35	2.49
Tandem disk	100	2.50	1.17
Offset disk	80	4.52	2.09
Peg tooth harrow	40	1.00	0.45
Sprayer/disk	100	2.75	1.30
Field cultivator	40	2.61	0.79
Bulk fertilizer spreader	30	2.00	0.73
NH3 applicator	60	2.69	1.43
Chisel plow, NH3 applic.	80	3.88	2.68
Grain drill	40	6.91	1.69
Broadcast seeder	40	3.11	1.61
Planter	60	4.69	1.52
No-till planter	60	5.63	1.87
No-till drill	60	9.28	3.15
Rotary hoe	50	0.93	0.45
Cultivator	80	1.84	1.04
Sprayer	50	1.10	0.59
Combine corn	170	12.47	8.79
Combine beans	80	11.65	5.81
Combine small grain	60	12.99	6.15
Haul grain (on farm)	150	0.02 /bu.	0.02 /bu.
Corn picker	120	16.15	10.05
Silage harvester	200	18.75	12.92
Haul silage	140	0.68 /ton	0.44 /ton
Mower-sickle	120	4.00	2.10
Mower-conditioner	120	4.32	2.47
Rake	100	2.42	1.63
Square baler (inc. twine)	100	0.17 /bale	0.14 /bale
Round baler (inc. twine)	120	2.41 /bale	2.83 /bale
Stacker	120	3.59	3.00
Windrower	100	3.92	2.25
Haul hay & straw	80	0.79 /ton	0.53 /ton
Forage chopper	200	11.24	7.80
Forage blower	50	\$0.51 /ton	\$0.19 /ton
