# ECON 337: Agricultural Marketing Spring 2014 

## Homework 3: Livestock Marketing Due: 03/11/2014

1. You are a manager for a wean-to-finish operation and want to determine the expected marginal return from feeding pigs to different weights. You know this will depend on several production measures and gather the following data to help with the analysis.

| Cost of late finisher diet, $\$ / \mathrm{lb}$ | $\$ 0.1875$ |
| ---: | ---: |
| Finisher ADG, lb | 1.85 |
| Facility cost, \$/pig/day | $\$ 0.10$ |
| Carcass price, $\$ / \mathrm{lb}$ | $\$ 0.90$ |
| Finishing mortality, $\%$ | $3.5 \%$ |
| Average days on feed | 120 |
| Yield, $\%$ | $75.0 \%$ |
| Number of pigs | 1000 |

a. The table below shows the shows the cumulative amount of feed at 5 pound increments of increasing live selling weight for finished hogs near market weight. Calculate the incremental amount of feed, incremental feed/gain, and marginal cost of gain for each 5 pound increase in live selling weight.

| Carcass weight, lb | Live wt, $\qquad$ lb | Cumulative feed, lb | Incremental feed, lb | Incremental Feed/Gain | Marginal cost of gain, \$/lb gain |
| :---: | :---: | :---: | :---: | :---: | :---: |
| 157.5 | 210 | 470.308 |  |  |  |
| 161.3 | 215 | 486.343 |  |  |  |
| 165.0 | 220 | 502.582 |  |  |  |
| 168.8 | 225 | 519.024 |  |  |  |
| 172.5 | 230 | 535.670 |  |  |  |
| 176.3 | 235 | 552.520 |  |  |  |
| 180.0 | 240 | 569.573 |  |  |  |
| 183.8 | 245 | 586.829 |  |  |  |
| 187.5 | 250 | 604.289 |  |  |  |
| 191.3 | 255 | 621.953 |  |  |  |
| 195.0 | 260 | 639.820 |  |  |  |
| 198.8 | 265 | 657.891 |  |  |  |
| 202.5 | 270 | 676.165 |  |  |  |
| 206.3 | 275 | 694.642 |  |  |  |
| 210.0 | 280 | 713.324 |  |  |  |
| 213.8 | 285 | 732.208 |  |  |  |
| 217.5 | 290 | 751.297 |  |  |  |
| 221.3 | 295 | 770.589 |  |  |  |
| 225.0 | 300 | 790.084 |  |  |  |

b. If the selling price for finished hogs is $\$ 0.90$ per pound carcass, what is the optimal live selling weight for your hogs? Explain how you determined this. Hint: Live Price $=$ Carcass Price $\times$ Yield
c. If the price of feed increased to $\$ 0.20$ per pound and the selling price for finished hogs is $\$ 0.90$ per pound carcass, would you expect the optimal live selling weight to increase, decrease, or stay the same? Explain why you expect this result.
d. What is the optimal selling weight if the price of feed is $\$ 0.20$ per pound and the selling price for finished hogs is $\$ 0.90$ per pound carcass? Calculate the incremental amount of feed, incremental feed/gain, and marginal cost of gain for each 5 pound increase in live selling weight. Show and explain how you determined this.

| Carcass weight, lb | Live wt, $\mathrm{lb}$ | Cumulative feed, lb | Incremental feed, lb | Incremental Feed/Gain | Marginal cost of gain, $\$ /$ cwt gain |
| :---: | :---: | :---: | :---: | :---: | :---: |
| 157.5 | 210 | 470.308 |  |  |  |
| 161.3 | 215 | 486.343 |  |  |  |
| 165.0 | 220 | 502.582 |  |  |  |
| 168.8 | 225 | 519.024 |  |  |  |
| 172.5 | 230 | 535.670 |  |  |  |
| 176.3 | 235 | 552.520 |  |  |  |
| 180.0 | 240 | 569.573 |  |  |  |
| 183.8 | 245 | 586.829 |  |  |  |
| 187.5 | 250 | 604.289 |  |  |  |
| 191.3 | 255 | 621.953 |  |  |  |
| 195.0 | 260 | 639.820 |  |  |  |
| 198.8 | 265 | 657.891 |  |  |  |
| 202.5 | 270 | 676.165 |  |  |  |
| 206.3 | 275 | 694.642 |  |  |  |
| 210.0 | 280 | 713.324 |  |  |  |
| 213.8 | 285 | 732.208 |  |  |  |
| 217.5 | 290 | 751.297 |  |  |  |
| 221.3 | 295 | 770.589 |  |  |  |
| 225.0 | 300 | 790.084 |  |  |  |
